### FEATURING MICROLOCK QUAT™ TECHNOLOGY

A new delivery system for quaternary ammonium compounds, used in the design of unique and innovative formulations for sanitising and industrial cleaning applications

- Released over extended time periods and reactivated by contact
- Attaches to surfaces and hands to provide extended performance
- Longer lasting protection from bacterial growth on skin and surfaces
- Improved product performance, with increased anti-bacterial protection
- Improved shelf life

A proud Australian family owned and operated chemical manufacturer based in Sydney

Operating for over 30 years and specialising in the manufacture of alcohol based hand sanitiser and quat ammonium antibacterial products

All formulations are in line with TGA, WHO and FDA standards and requirements (including the recently updated TGA 80% alcohol based medical grade requirement)
